Christopher Rose
Professor of Engineering
Brown University
182 Hope St.
Providence, RI 02912
phone: 401-863-9054
email: Christopher_Rose@brown.edu

Christopher Rose received the SB (1979), SM (1981) and PhD (1985) degrees in Electrical Engineering and Computer Science all from the Massachusetts Institute of Technology in Cambridge, Massachusetts, and is currently a Professor of Engineering and Director of STEMJazz Programs at Brown University. Chris is a Fellow of the IEEE cited for contributions to wireless system communications theory and a founding member of the Wireless Information Networks Laboratory (WINLAB) at Rutgers where he served as Associate Director from 1999 through 2007. He is also a past member of the Army Science Board. He is perhaps best known for work that appeared as a Nature cover article in 2004 which challenged the assumption that our first evidence of intelligent extraterrestrial life would be via radio. The common theme in Chris' work is communication/information theory which he sees as a lens on everything. Yes, everything: fundamental physics, evolution, molecular communication/computing, and society.
